

Sodium-ion Battery Market Research Report

Date: January, 2024

Author: Brendan Jephcott

GOLDEN DRAGON CAPITAL

Table of Contents

Executive Summary	2
1.0 Introduction	21
1.1 Discovery.....	21
1.2 Working Principal.....	22
1.3 Component Materials.....	24
1.4 Product Performance.....	24
1.4.1 Safety Performance	25
1.4.2 Rate Performance.....	26
1.4.3 Low Temperature Performance	27
1.4.4 Cycle Life Performance.....	28
1.4.5 Energy Density.....	28
1.5 Comparison to Lead-acid and Lithium-ion Batteries	28
1.6 Supportive Government Development Policies	30
2.0 Component Materials.....	33
2.1 Cathode Material	33
2.1.1 Layered Transition Metal Oxides Cathode Material	36
2.1.2 Polyanionic Cathode Material	42
2.1.3 Prussian Blue Cathode Material.....	48
2.2 Anode Material	56
2.2.1 Hard Carbon	60
2.2.2 Soft Carbon.....	70
2.2.3 Graphite	71
2.3 Electrolyte Material	73
2.4 Current Collector	75
3.0 Principal Battery Production Method.....	76
3.1 Cash Cost Analysis.....	77
4.0 Commercialisation	81
4.1 Energy Storage Systems.....	81
4.2 Two-Wheeler Electric Vehicles	83
4.3 Low-Speed Electric Vehicles	85
5.0 Competitive Landscape.....	88
5.1 Sodium-ion Battery Manufacturing Companies	91
5.1.1 Chinese Battery Manufacturers.....	91
5.1.2 Other Major Battery Manufacturers.....	108
5.2 Cathode Material Companies	118
5.3 Anode Material Companies	121
5.4 Electrolyte Material Companies	132
5.5 Current Collector Material Companies.....	133

GOLDEN DRAGON CAPITAL

6.0	Market Size	134
6.1	Sodium-ion Battery Forecast	134
6.2	Sodium Carbonate Demand	135
	References	139
	Disclaimer	141

Table of Figures

Figure 1: Working principal of the 'rocking chair battery' (illustrative).....	21
Figure 2: Sodium-ion batteries industry development history.....	22
Figure 3: High-performance sodium-ion batteries (illustrative).....	22
Figure 4: Working principal of a sodium-ion battery (illustrative).....	23
Figure 5: Safety tests done on 18650 type sodium-ion batteries	25
Figure 6: Safety tests on sodium-ion batteries	25
Figure 7: Thermal runaway risk in lithium-ion batteries which also applies to sodium-ion batteries.....	26
Figure 8: Sodium-ion battery discharge curve and corresponding temperature change	27
Figure 9: Sodium-ion battery operating temperature (-40°C to 80°C)	27
Figure 10: Sodium-ion batteries are applicable for large-scale energy storage and low-speed electric vehicles ..	29
Figure 11: Number of two-wheeler electric vehicles in China.....	30
Figure 12: Specific capacity and average voltage of different sodium-ion cathode materials	34
Figure 13: Summary of synthesis, challenges and solutions for sodium-ion cathode materials.....	35
Figure 14: Comparison of existing sodium-ion cathode materials.....	36
Figure 15: Categories of Na_xMO_2 layered transition metal oxide cathode material	37
Figure 16: Tunnel structure transition metal oxide	37
Figure 17: Increased specific capacity of layered metal oxides doped with iron	38
Figure 18: Electrochemical summary of layered oxide sodium-ion cathode materials, comparing voltage, capacity and energy density.....	39
Figure 19: Manganese dioxide to prepare sodium manganate reaction process	42
Figure 20: Polyanionic crystal structures.....	43
Figure 21: Polyanionic crystal structure of (a) maricite NaFePO_4 and (b) olivine NaFePO_4	44
Figure 22: Polyanionic crystal structure of NASICON type $\text{Na}_3\text{V}_2(\text{PO}_4)_3$	45
Figure 23: Polymorphism in $\text{Na}_2\text{CoP}_2\text{O}_7$ a) orthorhombic, b) triclinic and c) tetragonal forms.	45
Figure 24: Schematic representation of the $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$ structure viewed along the y axis.....	46
Figure 25: (a) Schematic diagram of anhydrous cube PBA structure; (b) Schematic diagram of PBA with crystal water cube structure.....	48
Figure 26: NiFe-PBA material thermogravimetric curve.....	50
Figure 27: Production with few defects and low crystal water using sodium citrate as chelating agent (blue line) 50	50
Figure 28: Polydopamine (PDA) coated PBAs (NFF) improves electrochemical performance	50
Figure 29: Electrochemical performance of PBAs is optimal when the ratio of doped nickel and cobalt is 2:3	51
Figure 30: Increase in cycle times after $\text{Na}_2\text{NiFe}(\text{CN})_6$, $\text{Na}_2\text{MnFe}(\text{CN})_6$ doped elements	51
Figure 31: Sodium ferrocyanide principal production flowsheet	52
Figure 32: Co-precipitation method principal production flowsheet.....	53
Figure 33: Hydrothermal method principal production flowsheet.....	53
Figure 34: Ball milling method principal production flowsheet.....	53
Figure 35: CATL presenting its first-generation sodium-ion battery product concept (2021).....	54
Figure 36: CATL's first-generation of sodium-ion batteries product features	54
Figure 37: CATL sodium-ion battery Prussian blue compound cathode material structure.....	54
Figure 38: Schematic structural diagram & electron microscope photo of hard carbon, soft carbon, and graphite.....	57
Figure 39: Specific capacity and average voltage of different sodium-ion anode materials	59
Figure 40: Future development trends of anode materials used in sodium-ion batteries	60
Figure 41: "House of Cards" model of hard carbon.....	61
Figure 42: Hard carbon sodium storage mechanisms	62
Figure 43: Comparison of different hard carbon anode production processes.....	64
Figure 44: Hard carbon has high specific capacity and low initial Coulombic efficiency.....	71
Figure 45: Composition and structure of graphite anode material.....	72
Figure 46: Expanded graphite has a strong sodium storage capacity.....	73
Figure 47: Research progress in Sodium-ion Battery electrolyte types.....	73
Figure 48: Future development trends of electrolyte material used in sodium-ion batteries.....	75
Figure 49: Principal manufacturing process of sodium-ion batteries and lithium-ion batteries is the same.....	76
Figure 50: Sodium-ion battery electrode principal processing flowsheet.....	76
Figure 51: Packaging of sodium-ion batteries (illustrative).....	77
Figure 52: (a) abundance of main elements in Earth's crust; (b) uneven distribution of lithium on the earth.....	77

List of Tables

Table 1: Comparison between the sodium-ion battery and lithium-ion battery component material systems	24
Table 2: Energy density and cycle time comparison of mainstream sodium-ion batteries	28
Table 3: Comparison of physicochemical properties between lithium and sodium.....	29
Table 4: Performance comparison of lead-acid batteries, lithium-ion batteries, and sodium-ion batteries	30
Table 5: Global government sodium-ion battery advocacy policies	31
Table 6: Performance comparison of mainstream sodium-ion battery cathode materials	34
Table 7: Summary of Electrochemical Performance of Sodium-ion Cathode Materials	35
Table 8: Electrochemical performance of layered oxides at 0.1C	39
Table 9: O3-Type LTMO cathode materials	40
Table 10: P2-Type LTMO cathode materials	40
Table 11: Common LTMO cathode materials used in sodium-ion batteries.....	40
Table 12: Product performance of mainstream LTMO cathode materials	41
Table 13: Product performance of mainstream polyanionic cathode materials	46
Table 14: Product performance of mainstream polyanionic cathode materials	47
Table 15: Improvement of electrochemical properties of NASICON-type cathode materials after modification	47
Table 16: Product performance of mainstream sodium-ion batteries using polyanionic cathode material	48
Table 17: Electrochemical performance of mainstream Prussian blue compound cathode materials.....	51
Table 18: Performance comparison of mainstream Prussian blue cathode material types	51
Table 19: Comparison of mainstream Prussian blue cathode material production methods	52
Table 20: Sodium-ion battery companies using Prussian cathode material	55
Table 21: Sodium-ion battery Prussian blue cathode material plans.....	55
Table 22: China production capacity distribution of sodium cyanide	56
Table 23: Mainstream overseas cyanide producers.....	56
Table 24: Properties of commonly used anode materials for sodium-ion batteries	57
Table 25: Performance comparison of anode materials used in sodium-ion batteries	59
Table 26: Comparison of hard carbon precursor principal production methods	65
Table 27: Performance comparison of hard carbon suppliers	66
Table 28: Comparison of advantages and disadvantages of mainstream hard carbon precursors	66
Table 29: Comparison of costs, yields, and expenses of various hard carbon precursors.....	67
Table 30: Performance comparison of hard carbon anodes produced from biomass precursors	67
Table 31: Performance comparison of hard carbon anodes produced from synthetic polymer precursors	68
Table 32: Performance comparison of hard carbon prepared from fossil fuel-based precursors	68
Table 33: Performance comparison of soft carbon and hard carbon.....	71
Table 34: Physical and chemical properties of electrolyte salt materials used in sodium-ion batteries	74
Table 35: Advantages and disadvantages of commonly used electrolyte solvents for sodium-ion batteries.....	74
Table 36: Performance requirements between battery aluminium foil and traditional foil.....	75
Table 37: Comparison of basic properties of lithium and sodium	77
Table 38: Sodium-ion cell cost vs lithium-ion cell cost (current technology).....	79
Table 39: Sodium-ion cell cost vs lithium-ion cell cost (future technology).....	80
Table 40: Complete life cycle cost of electricity of 4 kinds of electrochemical energy storage forms	82
Table 41: Current cost comparison of different energy storage batteries.....	83
Table 42: Sodium-ion battery energy storage application demonstration project.....	83
Table 43: Weight Comparison of Electric Vehicle Batteries	85
Table 44: Global development of major sodium-ion battery companies and commercialisation	90
Table 45: Estimated production capacity of sodium-ion batteries (2022-2023).....	91
Table 46: Summary of leading sodium-ion battery manufacturing companies in China	92
Table 47: Zhongke Haina cylindrical and soft pack sodium-ion battery product indicators	94
Table 48: Zhongke Haina module sodium-ion battery product indicators.....	94
Table 49: Zhongke Haina sodium-ion battery related patents	96
Table 50: CATL sodium-ion battery related patents	99
Table 51: CATL sodium-ion battery performance comparison	102
