

# PRECURSOR CATHODE ACTIVE MATERIAL (pCAM)

---

Industry Research Report

**Author:** Brendan Jephcott

**Date:** October 2024

## Table of Contents

Executive Summary .....	2
1.0 Introduction.....	10
1.1 Precursor Cathode Active Material.....	10
2.0 pCAM Processing Method.....	13
2.1 Hydroxide Co-precipitation-Method .....	13
2.2 Processing Parameters which affect pCAM Production .....	16
2.2.1 Ammonia Concentration .....	18
2.2.2 pH Value .....	19
2.2.3 Reaction Control of Ammonia Concentration and pH Value.....	20
2.2.4 Reaction Temperature .....	22
2.2.5 Reaction Time .....	22
2.2.6 Reaction Atmosphere.....	23
2.2.7 Solid Content .....	24
2.2.8 Stirring Rate .....	24
2.2.9 Flow Rate .....	25
2.2.10 Impurities.....	26
2.2.11 Control of Accuracy of Reaction Conditions .....	27
2.3 pCAM Production Equipment.....	27
2.3.1 Reactor .....	28
2.3.2 Filtration and Washing Equipment.....	29
2.3.3 Drying Equipment.....	30
2.4 Ternary Product Modification Methods.....	31
2.4.1 Element Doping Method.....	31
2.4.2 Surface Coating Method.....	32
2.4.3 Core Shell Structure.....	33
2.4.4 Single Crystal .....	36
3.5 Upstream Raw Material Requirements .....	37
3.5.1 Nickel Sulphate .....	37
3.5.2 Cobalt Sulphate.....	43
3.5.3 Manganese Sulphate .....	46
3.5.4 Sodium Hydroxide.....	49
3.5.5 Liquid Ammonia .....	50
3.6 Cash Cost Analysis (1USD ~ 7 CNY).....	51
4.0 Commercialisation .....	56
4.1 New Energy Vehicle Sales.....	56
4.2 Ternary Cathode Material Sales.....	58
4.3 Ternary pCAM Material Production.....	60
4.4 Competitive Landscape .....	61

# GOLDEN DRAGON CAPITAL

4.5	Prices (1USD ~ 7CNY).....	63
4.6	Market Size Potential.....	66
5.0	CNGR Advanced Material Co., Ltd .....	67
5.1	Corporate Overview.....	67
5.2	Ternary pCAM Business.....	67
5.2.1	Production Centres in China .....	68
5.2.2	Overseas Investments.....	69
5.2.3	pCAM Products.....	70
5.2.4	Upstream Layout.....	71
5.2.5	R&D Programmes.....	76
5.2.6	Customers.....	77
5.2.7	Financials (1USD ~ 7CNY) .....	78
6.0	Zhejiang Huayou Cobalt Co., Ltd.....	81
6.1	Corporate Overview.....	81
6.2	Ternary pCAM Business.....	81
6.2.1	Production Centres in China .....	81
6.2.2	pCAM Products.....	83
6.2.3	Upstream Layout.....	85
6.2.5	Customers.....	86
6.2.6	Financials (1USD ~ 7CNY) .....	87
7.0	GEM Co., Ltd .....	94
7.1	Corporate Overview.....	94
7.2	Ternary pCAM Business.....	94
7.2.1	Production Centres in China .....	94
7.2.2	Overseas Investments.....	96
7.2.3	pCAM Products.....	96
7.2.4	R&D Programmes.....	100
7.2.5	Customers.....	103
7.2.6	Financials (1USD ~ 7CNY) .....	104
	References.....	106
	Disclaimer .....	110

## Figures

Figure 1: pCAM is located within the lithium-ion battery midstream industry chain .....	10
Figure 2: pCAM is a black powder (illustrative) .....	10
Figure 3: Comparison of electrochemical performance of large and small particle cathode materials.....	12
Figure 4: The effect of specific surface area of the pCAM .....	13
Figure 5: Schematic of a coprecipitation reactor setup.....	14
Figure 6: Particle growth mechanism.....	15
Figure 7: pCAM co-precipitation principal processing flowsheet.....	15
Figure 8: Process parameters that affect the physical and chemical properties of the pCAM .....	17
Figure 9: SEM images of high nickel pCAM with different ammonia concentrations.....	18
Figure 10: Variation of tap density and nickel content with ammonia concentration .....	19
Figure 11: SEM images of three precursors prepared under different pH conditions.....	20
Figure 12: Effect of pH on tap density of pCAM.....	20
Figure 13: Ammonia concentration and reaction pH for different ternary pCAM ratios.....	21
Figure 14: SEM images of precursors with different ratios.....	21
Figure 15: SEM images at low reaction temperature (50°C left) and high temperature (60°C right).....	22
Figure 16: Tap density gradually increases with the increase of reaction time.....	23
Figure 17: NCM pCAM without nitrogen protection presents agglomerates of different sizes.....	23
Figure 18: Solid content of pCAM (left at 10%, right at 20%).....	24
Figure 19: Relationship between stirring speed and tap density .....	25
Figure 20: SEM images of pCAM at different stirring speeds .....	25
Figure 21: Relationship between oil content of feed liquid and tap density.....	26
Figure 22: Effect of organic impurities on pCAM morphology (left oil content is 9.5ppm, right oil content is 2ppm, precipitation time 36 hrs) .....	26
Figure 23: pCAM production equipment investment structure .....	27
